

Main Page

NOTE: Serpent is not open source software. The source code is proprietary and subject to export control limitations. The terms and conditions for using Serpent are listed in the software license agreement. For more information on distribution, see [Serpent website \(https://serpent.vtt.fi/users.htm\)](https://serpent.vtt.fi/users.htm).

NOTE: The Serpent Wiki is being replaced by new on-line documentation at: <https://serpent.vtt.fi/docs/>. The two documentations are currently used to complement each other, but the content of the Wiki is no longer updated.

Welcome to Serpent Wiki. This platform, set up in November 2015, serves as the on-line user Manual for Serpent 2, as well as a repository for input files, validation reports and other resources for Serpent users. A more general description of the code is found at the [project website \(https://serpent.vtt.fi/\)](https://serpent.vtt.fi/). This Wiki covers the features and capabilities of the most recent version of Serpent 2. The content is still very far from complete, and additional information can be found from the [Serpent 1 Manual \(https://serpent.vtt.fi/download/Serpent_manual.pdf\)](https://serpent.vtt.fi/download/Serpent_manual.pdf) and the [discussion forum \(https://serpent.vtt.fi/forum\)](https://serpent.vtt.fi/forum)

For general reference to Serpent, use:

J. Leppänen, V. Valtavirta, A. Rintala and R. Tuominen. Status of the Serpent Monte Carlo code in 2024. *EPJ Nuclear Sci. Technol.*, 11:3, 2025. doi: [10.1051/epjn/2024031](https://doi.org/10.1051/epjn/2024031)  (<https://doi.org/10.1051/epjn/2024031>).

Quick links to Serpent Wiki

Getting started

- [Instructions on running Serpent](#)
- [Input manual](#)
- [Description of output files](#)

- [Pitfalls and troubleshooting](#)
- [Tutorial](#)

Useful lists and tables

- [Definitions, units and constants](#)
- [Output parameters in the _res.m file](#)
- [Surface types](#)
- [ENDF reaction MT's and macroscopic reaction numbers](#)
- [Default isomeric branching ratios used in burnup calculation](#)
- [Pre-defined energy group structures](#)
- [Pre-defined material compositions](#)

Advanced features

- [Visualizing the results](#)
- [Automated depletion zone division](#)
- [Defining material volumes](#)
- [Automated burnup sequence for spatial homogenization](#)
- [Coupled multi-physics calculations](#)
- [FINIX fuel behavior module](#)
- [Transient simulations](#)
- [Sensitivity calculations](#)
- [Domain decomposition](#)
- [Variance reduction](#)

Resources for users

- [Collection of example input files](#)
- [Validation and verification](#)
